The specification describes a method of identifying a gene expression profile associated with metanephric mesenchyme development, e.g. in renal

Example 2; Fig 8; 151pp; English.

Identifying gene expression profile associated with metanephric mesenchyme development, comprises identifying genes e.g. sca-1 that are differentially expressed in metanephric mesenchyme cells at particular stage of embryonic development.

WPI; 2005-564566/57.

The method comprises identifying one or more genes that are differentially expressed at least 1.8 fold by one or more metanephric mesenchyme cells at a particular stage of embryonic development compared to one or more intermediate mesoderm cells. The method of the invention is useful for identifying a metanephric mesenchyme cell. These cells are useful for in vitro and in vivo generation of renal tissue, and are useful for treating disease such as acute renal failure, kidney transplant dysfunction and/or chronic renal failure. AEC02045-AEC02126 represent human genetic markers of metanephric mesenchyme/renal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 3106 BP;

AX MO2(ð · B CC associated (CA) nucleic acid, comprising two or more nucleic acid probes.

CC The invention also relates to a peptide array comprising two or more nucleic acid probes.

CC isolated polypeptides encoded by a CA nucleic acid sequence, a compound comprising two or more that binds to a polypeptide, which is prepared by immunizing a host animal composition comprising the polypeptide or its fragment which is prepared by immunizing a host animal composition comprising the polypeptide or its antigen binding fragment, a composition comprising the cantibody and a carrier, a method of screening for anticancer activity, a comethod of detecting a CA nucleic acid, a method of diagnosing cancer, a complex cacid an acid, a method of diagnosing cancer, a complex cacid in a cell. The CA nucleic acids are useful for detecting CA concleic acids. The antibody is useful for detecting the presence or complex correlates with the antibody, and detecting the presence or complex correlates with the presence of cancer cells in the complex correlates with the presence of cancer cells in an individual. The composition is useful for inhibiting growth of cancer cells in an individual. The invention is also useful for dangent to cancer cells in an individual. The invention is also useful for dangent to cancer cells in the gray cancer and for inhibiting expression of a CA gene in a cell. This sequence represents human cancer-associated cDNA of the company cancer and for inhibiting expression of a CA gene in a cell. This sequence represents human cancer-associated cDNA of the convertion. 밁 The invention relates to a nucleic acid array for detecting a cancer Nucleic acid array useful for detecting cancer associated nucleic acid, comprises two or more nucleic acid probes. The invention relates to a nucleic acid array for detecting a cancer cc associated (CA) nucleic acid, comprising two or more nucleic acid probes. Cr The invention also relates to a peptide array comprising two or more cisolated polypeptides encoded by a CA nucleic acid sequence, a compound that binds to a polypeptide, which is prepared by immunizing a host animal cc with a composition comprising the polypeptide or its antigen binding comprising the polypeptide or its antigen binding crement and collecting cells from the host expressing antibodies against the antigen or its antigen binding fragment, a composition comprising the cantibody and a carrier, a method of screening for anticancer activity, a method of detecting a CA nucleic acid, a method of diagnosing cancer, a cc method of detecting a CA nucleic acid, a method of diagnosing cancer, a nucleic acid in a cell. The CA nucleic acids are useful for detecting CA cc nucleic acids. The antibody is useful for detecting the presence or cc absence of cancer cells in an individual which involves contacting cells from the individual with the antibody and detecting a complex of a CA complex correlates with the presence of cancer cells in the complex correlates with the presence of cancer cells in the complex correlates with the presence of cancer cells in the complex correlates with the presence of cancer cells in the complex correlates with the presence of cancer cells in the complex correlates. The invention is also useful for diagnosing cancer, for treating cancer and for inhibiting expression of a CA gene in cell. This sequence represents human cancer-associated cDNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Nucleic acid array useful for detecting cancer associated nucleic comprises two or more nucleic acid probes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Diagnosis; DNA microarray; microarray; biochip; cancer; neoplasm; cytostatic; gene; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a novel predictor set comprising a plurality of polynucleotides and/or polypeptides whose expression pattern is predictive of the response of cells to treatment with a compound that modulates protein tyrosine kinase activity or members of the protein tyrosine kinase activity or members of the protein cytostatic, antiangiogenic, vasotropic and vulnerary activities and may be useful in the field of pharmacogenomics, in particular for determining drug sensitivity and in treating breast cancer, hypervascular diseases, angiogenesis and scars in wound healing. The current sequence is that of a human protein tyrosine kinase biomarker DNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New predictor sets with a plurality of polynucleotides and/or polypeptides whose expression pattern predicts cell response compound that modulates protein tyrosine kinase activity, use treating breast cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI;

CONTROL
                      The invention relates to a method of identifying a mammal that will respond therapeutically to a method of treating cancer by administering can epidermal growth factor receptor (EGFR) modulator by comparing the level of a biomarker in a mammal before and after exposure to an EGFR condulator. The method comprises: (a) measuring, in the mammal, the level of at least one biomarker identified in the specification; (b) exposing the mammal to the EGFR modulator; and (c) measuring in the mammal the level of the biomarker, where a difference in the level in step (c) compared to step (a) indicates that the mammal will respond the therapeutically to the method of treating cancer. The method and conditionally to a method of treating cancer by administering an epidermal growth factor receptor (EGFR) modulator. This sequence corresponds to one of the biomarkers whose levels of gene expression is measured in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Identifying a mammal that will respond therapeutically to a method of treating cancer comprises comparing the level of a biomarker in a mam before and after exposure to an epidermal growth factor receptor (BFG)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     08-JAN-2003;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   08-JAN-2004; 2004WO-US000368

                                                                                                                                                             S
                                                                                                                                                                                                                                                                                               CC antibacterial, immunosuppressive and antiinflammatory applications and CC may be used for early differential diagnosis, monitoring progression, CC assessing risk, assessing the likely response to treatment and for post CC mortem diagnosis of systemic inflammatory response syndrome, sepsis and CC sepsis-like conditions. The recombinant or synthetic nucleic acid CC sequences of the invention, or derived proteins or peptides, may be CC useful as calibrants in assays for the specified diseases, for evaluating CC activity or toxicity in screening for active agents and/or for CC preparation of agents for treatment or prevention of the specified CC diseases. The current sequence is that of a human SIRS/sepsis diagnostic CC marker DNA fragment of the invention. Note: The sequence data for this CC patent did not form part of the printed specification, but was obtained CC in electronic format directly from WIPO at ftp.wipo.int/pub/published CC into account during indexing due to inconsistencies in application and CC into account during indexing due to inconsistencies in application and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a novel method for in vitro detection of systemic inflammatory response syndrome (SIRS). The method comprises detecting abnormal expression of disease-related genes, or their associated peptides. The method of the invention demonstrates
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          31-MAR-2004; 2004WO-EP003419
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          14-OCT-2004

The method comprises contacting a cell expressing a gene selected from SEQ ID NO. 1-12 or 25-85, with a compound. The method of the invention demonstrates anorectic applications and may be useful for screening for compounds that reduce and/or prevent obesity. The current sequence is that of the human fibroblast growth factor receptor-2 transcript variant 2 DNA of the invention. The sequence listing for the specification can be located via the USPTO web-site.

CCAAATCCGAGGGGAGCCCGCGGGGGGTCATGGCGCTCCTCCGCAGCCTGGGGTACGC	after contacting with a candidate compound, and comparing the candidate compound alters the physiological property to determine whether the candidate compound alters the physiological property of a granulocyte. (M1) is useful for identifying a compound that alters one or more physiological property of a granulocyte (M2) is useful for disgnosing a granulocyte (in a biological sample, where the biological sample is a blood sample and tissue sample. The non-neutrophil granulocyte disorder or mast cell disorder in a biological sample. The non-neutrophil granulocyte disorder is a basophil-associated tumor or cancer. The mast cell disorder is a mast cell-associated tumor or cancer. The mast cell disorder is a mast cell-associated tumor or cancer. The mast cell disorder is a mast cell-associated tumor or cancer. The mast cell disorder is a mast cell-associated tumor or cancer. The mast cell disorder is a mast cell associated tumor or cancer. The mast copy of the compound identified by (M1) is useful for treating a granulocyte or mast cell associated the property of the compound identified by (M1) is useful for treating a granulocyte or mast cell elements, cutaneous mast coytosis such as urticaria pigmentosa and telengicersals anacularis entitive perstans. (M1) or (C1) is useful for drug discovery, disease entitive perstans and/or therapeutic application. (M1) is useful for secrening compounds to identify those that interacts with one or more cell type selective markers. (M1) is useful in dentifying leukocytes and leukocyte-selective markers. (M1) is useful in dentifying leukocytes and leukocyte-selective markers, and for diagnostic or prognostic purposes e.g. allergies, cancers, infections, basophil disorders such as asthma, essinophilic gastritis, essinophilic distins and eosinophilic colitis, essinophilic diseases such as scatted with one or more leukocyte cell types. This sequence encodes human fibroblast growth factor receptor 2, a granulocyte and/or mast cell-selective marker. Sequence 4574 BP; 1231 A; 1085 C;

A The invention relates to a nucleic acid array for detecting a cancer associated (CA) nucleic acid, comprising two or more nucleic acid probes The invention also relates to a peptide array comprising two or more isolated polypeptides encoded by a CA nucleic acid sequence, a compound that binds to a polypeptide, an isolated antibody or its fragment which binds to a polypeptide, which is prepared by immunizing a host animal with a composition comprising the polypeptide or its antigen binding fragment and collecting cells from the host expressing antibodies agains the antigen or its antigen binding fragment, a composition comprising the against sing the probes

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              antibody and a carrier, a method of screening for anticancer activity, a method of detecting a CA nucleic acid, a method of diagnosing cancer, a comethod of treating cancer and a method of inhibiting expression of a CA nucleic acid in a cell. The CA nucleic acids are useful for detecting CA nucleic acids. The antibody is useful for detecting the presence or absence of cancer cells in an individual which involves contacting cells from the individual with the antibody and detecting a complex of a CA protein from the cancer cells in an individual, where the detection of the complex correlates with the presence of cancer cells in the individual. The composition is useful for inhibiting growth of cancer cells in an individual or for delivering a therapeutic agent to cancer cells in an individual. The invention is also useful for diagnosing cancer, for treating cancer and for inhibiting expression of a CA gene in a cell. This sequence represents human cancer—associated cDNA of the

The invention relates to a novel method for in vitro detection of CC systemic inflammatory response syndrome (SJRS). The method comprises CC detecting abnormal expression of disease-related genes, or their CC associated paptides. The method of the invention demonstrates and cantibacterial, immunosuppressive and antinflammatory applications and CC may be used for early differential diagnosis, monitoring progression, CC assessing risk, assessing the likely response to treatment and for post CC mortem diagnosis of systemic inflammatory response syndrome, sepsis and CC sequences of the invention, or derived proteins or peptides, may be cuseful as calibrants in assays for the specified diseases, for evaluating CC useful as calibrants in assays for the specified diseases, for evaluating CC preparation of agents for treatment or prevention of the specified CC diseases. The current sequence is that of a human SIRS/sepsis diagnostic CC marker DNA fragment of the invention. Note: The sequence data for this CC marker DNA fragment of the invention at ftp.wipo.int/pub/published CC pitch account during indexing due to inconsistencies in application and CC into account during indexing due to inconsistencies in application and

The method comprises contacting a cell expressing a gene selected from SEQ ID NO. 1-12 or 25-85, with a compound. The method of the invention demonstrates anorectic applications and may be useful for screening for compounds that reduce and/or prevent obesity. The current sequence is that of the human fibroblast growth factor receptor-2 transcript variant 1 DNA of the invention. The sequence listing for the specification can be located via the USPTO web-site.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           2858
```

as EphA, VEGF, MET, RON, CSF, etc, useful treating cancer, or inflammatory, infectious, angiogenesis-related conditions, or immune

Example 1; SEQ ID NO 242; 647pp; English

CC compositions, molecules and methods are useful for treating cancers, conditions (conditions involving angiogenesis-related conditions (conditions involving angiogenesis, cell proliferation-cc immune disorders and neurodegenerative diseases. The disease or condition conditions involving hyperproliferation of cells, cell selected from rheumatoid arthritis, multiple sclerosis, posterior cc intraocular inflammation, uveitic disorders, coular surface inflammatory cintraocular inflammatoid arthritis, hemangioma, diabetes mellitus, cell sorders, neovascular disease, proliferative vitreoretinopathy, cell sorders, neovascular disease, proliferative vitreoretinopathy, cell sorders, neovascular stenosis, restenosis, inflammatory joint disease, lupus, cell cancer, beatomas, surinary obstructive syndromes, and asthma. The disease or condition is selected from carcinoma, lymphoma, blastoma, sarcoma, cell cancer, non-small cell lung cancer, adenocarcinoma of the lung, cancer, squamous cell cancer, small-cell lung cancer, strointestinal cancer, squamous call cancer, paparomas of the lung, squamous call cancer, paparoma, carcinoma, cancer, colon cancer, liver cancer, cancer, galioblastoma, cervical cancer, ovarian cancer, liver cancer, colorectal cancer, hepatoma, breast cancer, color cancer, paparoma, cancer, prostate cancer, vulval cancer, thyroid cancer, hepatic carcinoma, anal carcinoma, panile carcinoma, and head and cancer, mendation is selected from Myxoma virus, Vaccinia virus, or a carcinoma virus, or a virus or a cancer, and virus or a cancer cancer. parasite. The virus is selected from Myxoma virus, Vaccinia virus, Parasite. The virus is selected from Myxoma virus, Vaccinia virus, Tanapox virus, Epstein-Barr virus, Herpes simplex virus, Cytomegalovirus, Herpesvirus saimiri, Hepatitis B virus, African swine fever virus, Parovirus, Human Immune deficiency virus (HIV), Hepatitis C virus, Parovirus, Respiratory syncytial virus, Measles virus, Vesicular Influenza virus, Dengue virus and Ebola virus. The combination is useful for treating anglogenic-related disorder, a tumor and/or an immune disorder. This sequence represents a cell surface receptor isoform The invention describes an isolated polypeptide, comprising at least one domain of an EphA or EphB receptor, where the polypeptide comprises an ephrin ligand binding domain and the polypeptide lacks one or more amino acids corresponding to the transmembrane domain of the EphA or EphB receptor where the membrane localization of the polypeptide is reduced or abolished compared to the EphA or EphB receptor. The polypeptides, compositions, molecules and methods are useful for treating cancers, o R

CC associated (CA) nucleic acid, comprising two or more nucleic acid probes.

CC The invention also relates to a peptide array comprising two or more nucleic acid probes.

CC isolated polypeptides encoded by a CA nucleic acid sequence, a compound composition compressing the polypeptide or its fragment which is prepared by immunizing a host animal composition comprising the polypeptide or its fragment which is fragment, a composition comprising the polypeptide or its antigen binding compents and collecting cells from the host expressing antibodies against the antipody and a carrier, a method of screening for anticancer activity, a composition of a carrier, a method of screening for anticancer activity, a method of treating cancer and a method of inhibiting expression of a CA nucleic acid in a cell. The CA nucleic acids are useful for detecting CA complex correlates with the antibody and detecting the presence or complex correlates with the antibody and detecting cells from the individual with the antibody, where the detection of the complex correlates with the presence of cancer cells in an individual. The composition is useful for inhibiting growth of cancer cells in an individual or for delivering a therapeutic agent to cancer cells in an individual or for delivering a therapeutic agent to cancer cells in an individual. The invention is also useful for dagnosing cancer in a cell. This sequence represents human cancer-associated cDNA of the invention. The invention relates to a nucleic acid array for detecting a cancer

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 뮍
The invention relates to a nucleic acid array for detecting a cancer associated (CA) nucleic acid, comprising two or more nucleic acid probes. The invention also relates to a peptide array comprising two or more isolated polypeptides encoded by a CA nucleic acid sequence, a compound that binds to a polypeptide, an isolated antibody or its fragment which binds to a polypeptide, which is prepared by immunizing a host animal with a composition comprising the polypeptide or its antigen binding fragment and collecting cells from the host expressing antibodies against the antigen or its antigen binding fragment, a composition comprising the antibody and a carrier, a method of screening for anticancer activity, a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ADZ13044 standard; cDNA; 5000 BP.
